

Appln. No. 03/831,938  
Amendment dated February 13, 2005  
Reply to Office Action of October 28, 2004

Amendments to the Claims:

Please cancel claims 31-40 and add new claims 41-62 as follows. The following listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-40: Cancelled.

Claim 41 (New). A data reader for reading data from a recording medium which includes a first semiconductor storage area and a second dynamic storage area, the second dynamic storage area storing free and pay contents data, the first  
5 semiconductor storage area storing information to use the free and pay contents data, the data reader comprising:

means for reading the free and pay contents data;

means for inhibiting the reading means from reading the pay contents data by referring to the information stored in the first  
10 semiconductor storage area; and

means for permitting the reading means to read the pay contents in accordance with predetermined procedures by referring

Appin. No. 09/881,938  
Amendment dated February 16, 2005  
Reply to Office Action of October 29, 2004

to the information stored in the first semiconductor storage area.

Claim 42 (New). The data reader as defined by claim 41, further comprising means for connecting the recording medium to a server system of a center on the Internet.

Claim 43 (New). An information managing system comprising a data reader that reads data from a recording medium which comprises a first semiconductor storage area and a second dynamic storage area, the second dynamic storage area storing free and pay contents data, the first semiconductor storage area storing information to use the free and pay contents data, wherein one of the recording medium and the data reader comprises:

means for permitting the data reader to read the free contents data and for inhibiting the data reader from reading the pay contents data by referring to the information stored in the first semiconductor storage area; and

means for permitting the data reader to read the pay contents data in accordance with predetermined procedures by referring to the information stored in the first semiconductor storage area.

Appln. No. 09/881,538  
Amendment dated February 18, 2005  
Reply to Office Action of October 28, 2004

Claim 44 (New). The information managing system as defined by claim 43, wherein the inhibiting means is provided on the recording medium.

Claim 45 (New). The information managing system as defined by claim 43, wherein the inhibiting means is provided in the data reader.

Claim 46 (New). The information managing system as defined by claim 43, wherein the recording medium comprises means for converting the free contents data to pay contents data in accordance with the predetermined procedures,

Claim 47 (New). The information managing system as defined by claim 43, wherein the data reader comprises means for connecting the recording medium to the server system via the Internet.

Claim 48 (New). An information managing system comprising a data reader that reads data from a recording medium which comprises a first semiconductor storage area and a second dynamic

Amendment dated February 13, 2005  
Reply to Office Action of October 25, 2004

storage area, the second dynamic storage area storing free and  
5 pay contents data, the first semiconductor storage area storing  
information to use the free and pay contents data, and a server  
system on the Internet connectable to the data reader and  
controlled by a center on the Internet, wherein one of the  
recording medium, the data reader and the server comprises:

10 means for permitting the data reader to read the free  
contents data and for inhibiting the data reader from reading the  
pay contents data by referring to the information stored in the  
first semiconductor storage area; and

15 permitting means for permitting the data reader to read the  
pay contents data in accordance with predetermined procedures by  
referring to the information stored in the first semiconductor  
storage area.

Claim 49 (New). The information managing system as defined  
by claim 48, wherein the inhibiting means is provided in the  
server system.

Claim 50 (New). The information managing system as defined  
by claim 48, wherein the predetermined procedures comprise  
payment of a required charge to the center.

Appl. No. 09/561,938  
Amendment dated February 15, 2005  
Reply to Office Action of October 23, 2004

Claim 51 (New). The information managing system as defined by claim 48, wherein the predetermined procedures comprise inputting authentication data from the reader to the server system.

Claim 52 (New). A data reader comprising:

a recording medium which includes a first semiconductor storage area and a second dynamic storage area, the second dynamic storage area storing free and pay contents data, the  
5 first semiconductor storage area storing information to use the free and pay contents data;

means for reading the free and pay contents data;

means for inhibiting the reading means from reading the pay contents data by referring to the information stored in the first  
10 semiconductor storage area; and

means for permitting the reading means to read the pay contents in accordance with predetermined procedures by referring to the information stored in the first semiconductor storage area.

Appln. No. 09/881,939  
Amendment dated February 19, 2005  
Reply to Office Action of October 28, 2004

Claim 53 (New). The data reader as defined by claim 52, further comprising means for connecting the recording medium to a server system of a center on the Internet.

Claim 54 (New). An information managing system comprising:  
a data reader which includes a recording medium that comprises a first semiconductor storage area and a second dynamic storage area, the data reader reading data from the recording  
5 medium, the second dynamic storage area storing free and pay contents data, the first semiconductor storage area storing information to use the free and pay contents data, wherein one of the recording medium and the data reader comprises:

means for permitting the data reader to read the free  
10 contents data and for inhibiting the data reader from reading the pay contents data by referring to the information stored in the first semiconductor storage area; and

means for permitting the data reader to read the pay  
contents data in accordance with predetermined procedures by  
15 referring to the information stored in the first semiconductor storage area.

Appin. No. 09/061,933  
Amendment dated February 15, 2005  
Reply to Office Action of October 28, 2004

Claim 55 (New). The information managing system as defined by claim 54, wherein the inhibiting means is provided on the recording medium.

Claim 56 (New). The information managing system as defined by claim 54, wherein the inhibiting means is provided in the data reader.

Claim 57 (New). The information managing system as defined by claim 54, wherein the recording medium comprises means for converting the free contents data to pay contents data in accordance with the predetermined procedures.

Claim 58 (New). The information managing system as defined by claim 54, wherein the data reader comprises means for connecting the recording medium to the server system via the Internet.

Claim 59 (New). An information managing system comprising:  
a data reader which includes a recording medium that  
comprises a first semiconductor storage area and a second dynamic  
storage area, the data reader recording data from the recording  
5 medium, the second dynamic storage area storing free and pay

Amendment dated February 23, 2005  
Reply to Office Action of October 29, 2004

contents data, the first semiconductor storage area storing  
information to use the free and pay contents data, and a server  
system on the Internet connectable to the data reader and  
controlled by a center on the Internet, wherein one of the  
10 recording medium, the data reader and the server comprises:  
means for permitting the data reader to read the free  
contents data and for inhibiting the data reader from reading the  
pay contents data by referring to the information stored in the  
first semiconductor storage area; and  
15 permitting means for permitting the data reader to read the  
pay contents data in accordance with predetermined procedures by  
referring to the information stored in the first semiconductor  
storage area.

Claim 60 (New). The information managing system as defined  
by claim 59, wherein the inhibiting means is provided in the  
server system.

Claim 61 (New). The information managing system as defined  
by claim 59, wherein the predetermined procedures comprise  
payment of a required charge to the center.

Appln. No. 09/261,936  
Amendment dated February 18, 2005  
Reply to Office Action of October 28, 2004

Claim 62 (New). The information managing system as defined by claim 59, wherein the predetermined procedures comprise inputting authentication data from the reader to the server system.
